

Welcome to DiamondGems Project

White Paper

Developer Team

What is DiamondGems ?

DiamondGems is a decentralized, peer-to-peer digital currency based on the Binance Smart Chain with a large focus placed on the 100% community. It can be traded like any other cryptocurrency, with lower gas fees than the majority of other popular blockchains.

Why should DiamondGems ?

This project is 100% safe. because our plan in the future we will work with several companies in Europe to make DiamondGems as a means of payment. And also this project will be run by the community.

The idea behind of DiamondGems

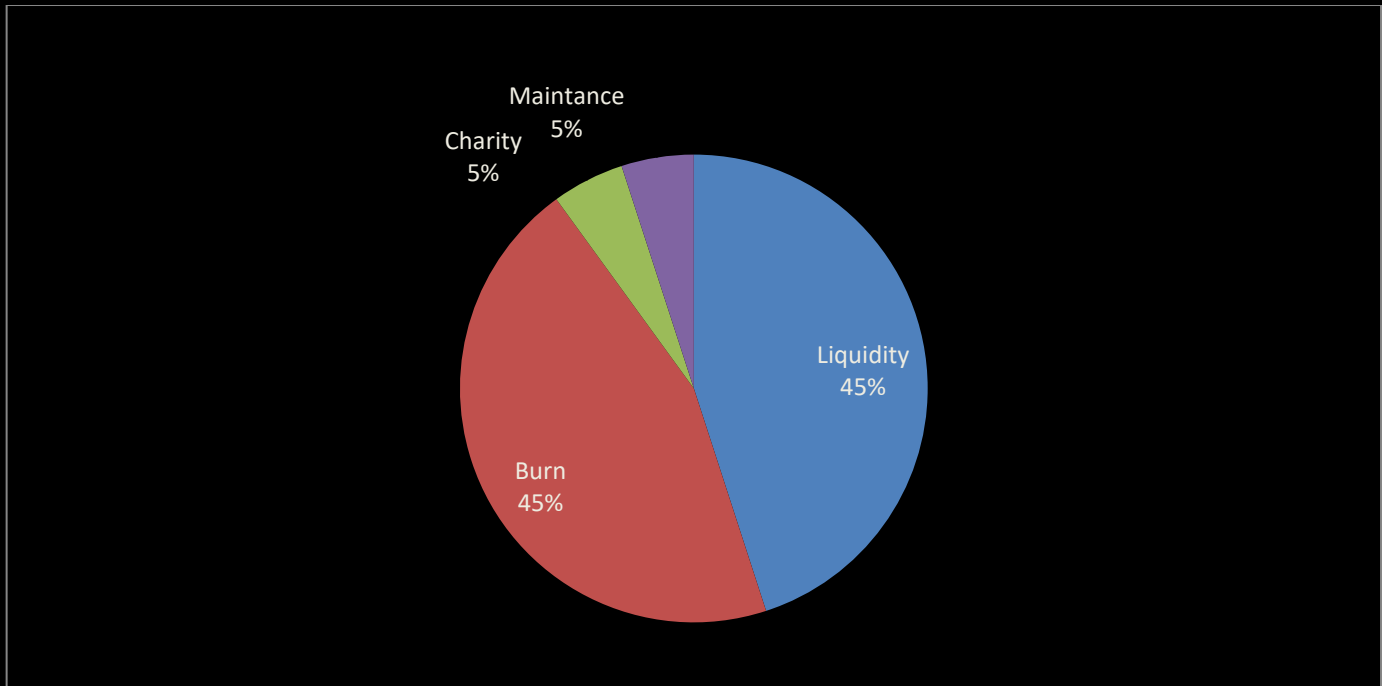

The idea of DiamondGems is to gather a community of steadfast individuals and crypto lovers centered around the same project. As seen with other projects on the BSC blockchain, we cannot underestimate the power of people working together on the same mission. We firmly believe that DiamondGems have the ability to reach the stars and build something extraordinary! In addition, because we value the importance of loyal investors.

Tokenomic Launch

- Name : DiamondGems
- Symbol : \$DG
- Network : Binance smart chain

Total Supply : 1Q

Featuresie:

- 5% of transactions are shared across all holders, meaning the more you hold, the more \$DG you gain!
- 4% of transactions are added to liquidity to make sure you can withdraw whenever you feel comfortable.
- 1% of transactions are added to the charity wallet.

Launch Detail

DiamondGems will launch with the agreement of all members. DiamondGems will be a fair launch to give every investor equal opportunity. The circulating supply after the launch burn will be five hundred trillion, which will be added to the liquidity pool at the specified deadline. As extra security, we have limited transactions to a maximum of 5 trillion per tx, meaning only 1% of tokens can be traded at any point in time. This should significantly reduce the amount of whales, as well as pump and dump holders.

in addition to the 50% burn at launch, manual burns will take place at the following milestones :

2000 holders – 10% Burn

4000 holders – 10% Burn

5000 holders – 15% Burn

If you have any questions prior to the launch, feel free to contact the development or moderator team, of which can be found on our telegram below :

Safety Project

The safety of our holders funds is of the greatest importance to us, and therefore we will take the following measures to protect you as an investor.

- Initial LP Token burn to prevent rug pulls
- No minting function within the contract
- No presale – Equal opportunities for all investors
- Contract Verified on BSC Scan to provide total clarity within our project
- Audits within the first week of the contract launching
- Anti-bot Measures to prevent contract sniping

The contract will be available to be viewed at release, this is to ensure that sniper bots such as those featured on bogged.finance, are unable to attempt to purchase a majority of the token pool, as with what happened with the launch of coins such as “Refinable”.

Roadmap :

- ✓ **Q1** : - **Website**
 - **Roadmap and whitepaper release**
 - **Fair Launch**
- ✓ **Q2** : - **Social Campaign and community events**
 - **Develop long-term plan**
 - **Discussing Charity NFT ideas**
- ✓ **Q3** : - **Partnership with company which have identical goals**
 - **CMC and CG listing (2500 holders)**
 - **Audit by Techrate / Certik (4000 holders)**
 - **New logo and branding creation**
- ✓ **Q4** : - **Website redesign**
 - **New whitepaper**
 - **Influencer promotor**
 - **Initial check listing (Hotbit,Cointiger,Bilaxy)**
